## About Medicated

---

Medicated is a tool developed for the caregivers of the elderly and infirmed to help improve the quality of care. The tool allows caregivers (both professional as well as family and friends) the ability to stay better informed about the medications their patients and loved ones are taking as well as possible drug and/or food interactions. The tool pulls information from multiple data sources that can be accessed via an easy-to-use search feature on the web, a native iOS app and a native Android app. It also provides an easy way to track current medications being taken by the patient by allowing the caregivers the ability to create virtual “medicine cabinets” to be viewed and shared at any time. Our ultimate goal is to give the caregiver the

## FDA approves new antiplatelet drug used during heart procedure

June 22, 2015

The U.S. Food and Drug Administration today approved Kengreal (cangrelor), an intravenous antiplatelet drug that prevents formation of harmful blood clots in the coronary arteries, the blood vessels that supply blood to the heart. It is approved for adult patients undergoing percutaneous coronary intervention (PCI), a procedure used to open a blocked or narrowed coronary artery to improve blood flow to the heart muscle.

According to the Centers for Disease Control and Prevention, PCI is performed on approximately 500,000 people in the United States each year.
