

About Medicated

Medicated is a tool developed for the caregivers of the elderly and infirmed to help improve the quality of care.

The tool allows caregivers (both professional as well as family and friends) the ability to stay better informed about the medications their patients and loved ones are taking as well as possible drug and/or food interactions. The tool pulls information from multiple data sources that can be accessed via an easy-to-use search feature on the web, a native iOS app and a native Android app.

Track Current Medications.

Medicated also provides an easy way to track current medications being taken by the patient by allowing the caregivers the ability to create virtual “medicine cabinets” to be viewed and shared at any time. Our ultimate goal is to give the caregiver the tools to take control of the coordination and quality of care of those in need.
